

CAHE's new textbook release: *Practical tips in finding the evidence: An allied health primer*

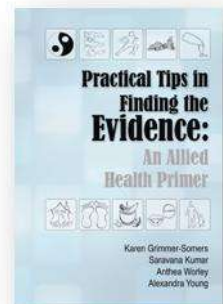

CAHE's new textbook: *Practical tips in finding the evidence: An Allied Health Primer* is available now.

Representing years of research and exploration into the fields of evidence-based practice in allied health the new CAHE textbook is dedicated to providing pathways to evidence in a range of AH fields.

The CAHE textbook provides practical examples about how to translate clinical questions into evidence statements. Clinical questions are generated when patients present for treatment, and clinicians are uncertain about how best to manage their condition. Outlining the process of searching and interpreting the literature in terms of how to find best evidence answers, the purpose of this textbook is to provide a step-by-step guide to the process of searching. These techniques can be applied to any clinical case, at any time, by any allied health clinician with access to the internet or a library, using freely available research literature sources.

Allied health disciplines included in this new textbook are:

Acupuncture	Chiropractic and osteopathy
Naturopathy	Nutrition
Occupational therapy	Physiotherapy
Podiatry	Prosthetics and orthotics
Social work	Speech pathology

Expert clinicians were recruited for each allied health discipline showcased in this book to assist with the interpretation of the theory of searching for evidence, in practical clinical terms. They provided an overview of their discipline and its philosophy, the tasks generally undertaken by their discipline, and one or more case scenarios that reflected 'usual' patients to their clinic.
