SCED Scale

Rating Scale for Single Participant Designs

	For each item, please justify scoring (for both "yes" and "no" responses), by at least mentioning page and paragraph numbers in the field	Rater 1:		Rater 2:		Consensus	
	underneath the tick boxes.	yes	no	yes	no	yes	no
1.	Clinical history was specified. <i>Must include Age, Sex,</i> <i>Aetiology and Severity.</i>	specify page &	paragraph	specify page &	paragraph	specify page &	paragraph
2.	Target behaviours. Precise and repeatable measures that are operationally defined. <i>Specify measure of target behaviour.</i>						
3.	Design 1: 3 phases. Study must be either A-B-A <u>or</u> multiple baseline						
4.	Design 2: Baseline (pre-treatment phase). Sufficient sampling was conducted						
5.	Design 3: Treatment phase. Sufficient sampling was conducted						
6.	Design 4: Data record. Raw data points were reported						
7.	Observer bias: Inter-rater reliability was established for at least one measure of target behaviour						
8.	Independence of assessors						
9.	Statistical analysis						
10	Replication: <i>either</i> across subjects, therapists or settings						
10.	Replication. entier across subjects, therapists of settings				_		
11.	Evidence for generalisation
