

A unique pathway to a Bachelor of Engineering.

If you don't have a traditional background of maths and science, just missed the engineering TER requirements, or do not have the subject prerequisites, then the Associate Degree in Engineering is for you.

It's a unique way to get you into UniSA's Bachelor of Engineering programs sooner. In your first year, you will undertake introductory engineering courses as well as the essential maths and science courses you will need for further engineering study. Once you successfully complete the eight first year courses, you will move straight into your choice of six Bachelor of Engineering programs.

Entry to this degree is direct to UniSA through Apply Online. Even if you haven't applied for engineering through SATAC, you can still apply (as long as you have completed Year 12 and obtained a competitive TER).

**Engineering positions still available for enrolment in 2009.
Applications close Wednesday 25 February.**
