

# Galilean Nights

## at the Adelaide Planetarium

Friday 23 October  
7.30-8.30pm.  
\$5 and \$3.50 conc.  
at the door

Galileo Galilei

Wind the clock back 400 years and follow in the footsteps of a giant — experience now just what first amazed Galileo in 1609 at the Adelaide Planetarium. What did Galileo see in his telescope? Take a journey of the night sky with popular astronomy educator **Martin Lewicki** under the dome of the Adelaide Planetarium. Experience sky simulations of Galileo's observations of the Moon, Jupiter, Venus and Saturn and how this changed the course of astronomy and science. An observing session is also planned after the presentation - weather permitting. If you have binoculars bring them along.
